

FIX-A-LEAK WEEK

March 15-21, 2021

Please join **DWS** in observance of **Fix-a-Leak Week** by checking your property for leaking water fixtures and pipes. It's easy to do and, in most cases, homeowners can fix leaks for a small investment. Follow these simple steps to find household water leaks:

FIXING HOUSEHOLD LEAKS CAN:

- ✓ **SAVE WATER**
- ✓ **LOWER YOUR WATER BILL**
- ✓ **PROTECT YOUR HOME FROM WATER DAMAGE**

- Turn off all your water faucets, pipes, and other water-using fixtures to make sure no water is running.
- Locate your water meter, which should be in a concrete box flush with the ground and typically placed fronting your property where it meets the road.
- Carefully open the meter cover and check to see if the dial is moving. If it is, you have a leak! Repair the leak as soon as possible to reduce water loss and save money on your water bill.
- Visually inspect faucets, pipes, and plumbing fixtures. For toilets, use dye tablets to check for leaks.
- Finally, examine your lawn for wet spots where grass seems greener. This could indicate a broken underground pipe. For more information, please visit:
